

A Textbook on Linear Algebra with its Applications

Author: Ramakant Meher, Sardar Vallabhbhai National Institute of Technology, Surat, Gujarat, India

This book contains a detailed discussion of the matrix operation, its properties, and its applications in finding the solution of linear equations and determinants. Linear algebra is a subject that has found the broadest range of applications in all branches of mathematics, physical and social sciences, and engineering. It has a more significant application in information sciences and control theory.

A definition of linear algebra is that it is a part of algebra which is concerned with equations of the first degree. Thus, at the fundamental level, it involves the discussion of matrices and determinants, and the solutions of systems of linear equations, which have a wide application in further discussion of this subject.

Technical topics discussed in the book include:

- Matrices
- Vector spaces
- Eigenvalue and eigenvectors
- Linear transformation
- Inner product spaces
- Diagonalizations
- Applications to conics and quadrics
- Canonical forms
- Least squares problems.

TABLE OF CONTENTS

1. Matrices
2. System of Linear Equations and Determinants
3. Vector Spaces
4. Eigenvalues and Eigenvectors
5. Linear Transformation
6. Inner Product Spaces
7. Matrix Representation of Linear Transformations
8. Diagonalizations
9. Application to Conics and Quadrics
10. Canonical Forms
11. Least Square Problems

River Publishers Series in Mathematical, Statistical and Computational Modelling for Engineering

ISBN: 9788770041577

e-ISBN: 9788770041270

Available From: March 2025

Price: \$ 140.00

KEYWORDS:

Matrices, vector spaces, eigenvalue and eigenvectors, linear transformation, inner product spaces, diagonalizations, conics, quadrics, canonical forms, least squares problems
