

Advances in Mathematics: Theory, Methods & Applications

Authors:

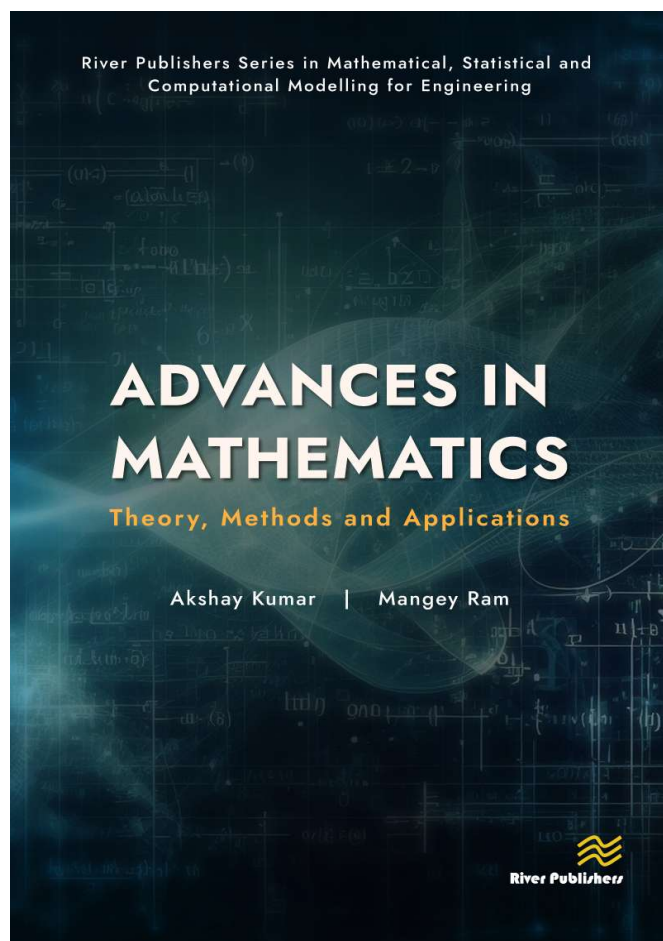

Akshay Kumar, Graphic Era Hill University, India

Mangey Ram, Graphic Era Deemed to be University, India

This book is an excellent collection of various topics of mathematics which include numerical methods, integral equations, and differential equations. The book is recommended to readers to refresh their understanding of applied mathematics with theory and applications. It will be useful to students, researchers, and practitioners working in applied and computational mathematics.

TABLE OF CONTENTS

- Natural Concept, the Foundations of Mathematics
- Mathematical Models of Wound Healing and Tissue Regeneration: Insights with Numerical Solutions
- An Alternate Approach to Solving Two Stage Transportation Problems with Uncertain Parameters
- Existence and Controllability Results on a Fractional Sobolev-type Differential System of Order $\frac{1}{2}$ in a Banach Space
- Mathematical Modeling using Fuzzy Petri Nets and its Classifications
- Unveiling Dynamics of Solutions for the Variable Killing Rate Brain Tumor Model with Lie Symmetry Analysis
- Herd Behaviour in Prey and Cooperative Hunting in Predators with Holling Type-II: A Dynamical Approach
- Aryabhata's Contribution to Advancements in Arithmetic
- A Brief Account of Ancient Indian Astronomy and Mathematics
- Identification of Leak Locations with Mathematical Modelling: A Case of a Water Distribution Network

River Publishers Series in Mathematical, Statistical and Computational Modelling for Engineering

ISBN: 9788770046695

e-ISBN: 9788770046688

Available From: June 2025

Price: \$ 140.00

KEYWORDS:

Foundations of mathematics, Euclides, Newton, Euler, Wolf, identification of leak equation of continuity, numerical model, data analysis, machine-learning models, quantile regression, optimal solution, two-stage fuzzy transportation problem, trapezoidal fuzzy number, measure of noncompactness, fuzzy logic, fuzzy production rules, Petri nets, knowledge-based systems, hyperbolic function, exponential function, trigonometric function, brain tumor model, lie symmetry method, exact solutions, power series, multiple Appell polynomials, prey-predator system, Holling type II functional.
