

Digital Signal Processing: A Breadth-First Approach

Authors:

Muhammad Nasir Khan, The University of Lahore, Pakistan
S. K. Hasnain, Swedish College of Engineering, Pakistan
Mohsin Jamil, National University of Sciences and Technology, Pakistan

The subject of Digital Signal Processing (DSP) is enormously complex, involving many concepts, probabilities, and signal processing that are woven together in an intricate manner. To cope with this scope and complexity, many DSP texts are often organized around the “numerical examples” of a communication system. With such organization, readers can see through the complexity of DSP, they learn about the distinct concepts and protocols in one part of the communication system while seeing the big picture of how all parts fit together. From a pedagogical perspective, our personal experience has been that such approach indeed works well.

Based on the authors' extensive experience in teaching and research, *Digital Signal Processing: a breadth-first approach* is written with the reader in mind. The book is intended for a course on digital signal processing, for seniors and undergraduate students. The subject has high popularity in the field of electrical and computer engineering, and the authors consider all the needs and tools used in analysis and design of discrete time systems for signal processing.

Key features of the book include:

- The extensive use of MATLAB based examples to illustrate how to solve signal processing problems. The textbook includes a wealth of problems, with solutions
- Worked-out examples have been included to explain new and difficult concepts, which help to expose the reader to real-life signal processing problems
- The inclusion of FIR and IIR filter design further enrich the contents

River Publishers Series in Signal, Image and Speech Processing

ISBN: 9788793379404

e-ISBN: 9788793379398

Available From: April 2016

Price: € 80.00

KEYWORDS:

Electrical Engineering, Computer Engineering, Digital Signal Processing, Signals and Systems, Convolution and Correlation, Z Transform, Discrete Time Fourier Transform, Digital Filters, Design of FIR Filters, Design of IIR Filters, Finite Word Length Effects
